DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 23-25 are rejected under 35 U.S.C. 102(a) as being anticipated by Volk et al. (U.S. Patent No. 6,166,563). Referring to claim 23, Volk et al. discloses a legged driver (Fig. 2 and respective portions of the specification), comprising: a plurality of driver legs (Fig. 2 ref. sign 210), the driver legs sequentially (here it is understood that the legs are being enabled by following a certain order, col. 2 lines 54 - col. 3 line 24) enableable by a set of external signals (output data, col. 3 lines 4-17) to provide multiple driver strengths (here it is understood that the fact that the drivers are programmable represents multiple driver strengths, col. 2 lines 54 - col. 3 line 24).

Referring to claim 24, Volk et al. discloses the driver of claim 23, wherein each of the plurality of legs is identical (Fig. 2 ref. sign 210).

Referring to claim 25, Volk et al. discloses the driver of claim 23, wherein each of the plurality of legs has a different strength (binary relationship, col. 2 lines 51-55).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Diepestraten et al.

Referring to claim 1, Diepestraten et al. discloses a current location identification (Fig. 4, ref. sign 86), a destination location identification (Fig. 4, ref. sign 84), a distance between the current location and the destination location (col. 2 lines 53-57 and col. 2 line 66-col. 3 line 3), enabling a driver strength according to the determined distance (col. 1 lines 47-50 and col. 2 lines 53-63), but does not explicitly disclose a method for driver selection. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have included a method for driver selection to the invention of Diepestraten et al. because anything that adjusts the power level of information packets used for transmissions between stations, as in Diepestraten et al., is a method for driving.

Referring to claim 2, Diepestraten et al. discloses determining a current location identification comprises interpreting hard-wired identification location bits of the driver (The Source Address (SA) is a hard-wired identification, col. 4 lines 1-13).

Art Unit: 2664

Referring to claim 3, Diepestraten et al. discloses determining a destination location identification comprises reading a plurality of destination location bits appended to a data packet (See (DA) col. 4 lines 1-13 and col. 4 lines 28-31).

Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Burton et al. in view of Volk et al.

Referring to claim 12, Burton et al. discloses a method for forwarding packets in a driver (col. 14 lines 20-32), but fails to teach the driver being a legged driver comprising: enabling sufficient legs in the driver to power a transfer of a packet from an input location to an output destination. Volk et al. discloses a driver with enabling legs in (col. 2 lines 51-63). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have included the invention of Volk et al. to the invention of Burton et al. so that the proper output data can be supplied to the logic section as in Volk et al.

Allowable Subject Matter

5. Claims 7-11, 14-22, 26 and 27 are allowed.
6. Claims 4-6 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
